AR-HR-005 — Leave, attendance and occasional remote work

Document ID: AR-HR-005

Knowledge class: Human Resources policy

Owner layer and node: Layers 2 and 3 / Administrative and Organizational Resources Deputy — Human Resources Unit

Version: 1.0 | Date: Mehr 1403 / October 2024 | Status: Approved

Purpose and scope

This policy establishes traceable leave and attendance decisions while protecting service continuity and employee privacy. It applies to the fictional company's administrative, hardware and software staff. The direct manager plans coverage, Bahar Eskandari maintains the leave record, Maryam Nouri coordinates administrative consistency and accounting uses authorized attendance results for payroll. Attendance is evidence of working arrangements, not a substitute for quality or performance assessment. This internal policy does not invent statutory entitlements, medical rulings, carry-forward rules or a company-wide workweek that the approved facts have not specified. Unspecified legal treatment is reviewed through AR-LEG-009 rather than guessed from another employer's practice.

1. Definitions and attendance record integrity

Definition and boundary: Attendance means work performed under the agreed schedule and location; leave is authorized non-working time, while occasional remote work remains working time.

Required inputs: Use the agreed work arrangement, actual start/end evidence, approved assignments, leave balance and coverage commitments; do not assume unspecified weekly hours.

Procedure: Step 1.1: Employees report discrepancies to their direct manager; Bahar Eskandari corrects the record only after reconciling the supporting evidence and authorization. Step 1.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: A missing entry is not automatically absence and a remote login is not automatically a completed workday; seek corroboration before determining the attendance status.

Output and responsibility: Retain original and corrected entries with the reason and approver so accounting can distinguish an administrative correction from a change to entitlement.

Boundary control: Before acting, distinguish an organizational fact from a proposed action and a completed outcome. The initiating record must identify who raised the matter, what is within scope and which dependency remains unresolved. If the available evidence contradicts the

request, return the discrepancy for clarification instead of rewriting the evidence to fit the desired conclusion. The receiving reviewer must be able to explain the boundary without relying on an undocumented conversation.

2. Annual paid leave and coverage planning

Definition and boundary: Annual paid leave is 26 working days per year; the balance is recorded as an entitlement distinct from sick and unpaid leave.

Required inputs: The employee provides requested dates, current work, handover needs and known delivery conflicts; HR verifies the available balance.

Procedure: Step 2.1: The direct manager arranges coverage and confirms a workable plan before HR records approval; planned leave should be requested before the intended absence. Step 2.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: If essential coverage is unavailable, discuss alternative dates with reasons rather than silently rejecting or treating the request as a performance failure.

Output and responsibility: Retain approved dates and handover details; do not invent carry-over or cash-settlement limits, and send unresolved entitlement questions to HR/legal review.

Evidence control: Separate observed facts, statements supplied by another party and assumptions requiring validation. An attachment is useful only when its source, relevance and relationship to the current question are clear. Where information is incomplete, state the gap and its effect on the decision. Reuse previously verified evidence when applicable, but check that its role, project and reporting period still match the present request.

3. Sick leave and medical confidentiality

Definition and boundary: Sick leave requires a certificate; its medical basis is handled confidentially and is not replaced by a manager’s informal diagnosis.

Required inputs: Collect notice of inability to work and the supporting certificate, with only the information necessary to verify the leave and expected coverage need.

Procedure: Step 3.1: The employee notifies the direct manager as soon as practicable; Bahar Eskandari verifies documentation and records the status without circulating diagnostic detail to the team. Step 3.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: If a certificate is delayed or unclear, mark the record as pending verification; do not automatically convert illness into unauthorized absence or annual leave.

Output and responsibility: Retain medical evidence in restricted HR storage, provide the manager only scheduling information and refer disputed eligibility or payroll treatment for appropriate legal review.

Execution control: Start with a complete request, identify the responsible organizational node, perform the stated review and obtain the required decision before communicating a

commitment. If work moves to another unit, the sending owner supplies the context and the receiving owner acknowledges the task. A handoff is not complete merely because a message was sent; the recipient must understand the expected action and the evidence needed for closure.

4. Unpaid leave and approval boundaries

Definition and boundary: Unpaid leave up to 30 days requires deputy approval; requests above that range and up to 90 days require CEO approval.

Required inputs: Use the requested duration, reason, accumulated related requests, role coverage, return expectations and accounting consequences to determine the correct authority.

Procedure: Step 4.1: The direct manager proposes coverage, the deputy reviews continuity, Bahar Eskandari checks the record and Arash Moradi decides requests within the CEO range. Step 4.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: Exactly 30 days remains within deputy approval; more than 90 days has no automatic entitlement under this policy and requires explicit legal and executive review.

Output and responsibility: Retain the authorized interval, return arrangement and payroll instruction; do not split one continuous absence into smaller requests to avoid the approval boundary.

Decision control: Compare the alternatives against the stated criteria and record why the selected option is appropriate. Approval, conditional approval, rejection and deferral are different outcomes and must not be expressed with ambiguous wording. A conditional decision remains subject to its conditions. If an employee lacks authority, the correct action is an explicit escalation, not an informal promise that the higher layer will approve later.

5. Hourly leave and balance reconciliation

Definition and boundary: Hourly leave is limited to 4 hours per day and 16 hours per month; it is tracked separately in hours to prevent hidden conversion errors.

Required inputs: The request states departure/return time, work coverage and the month’s already approved hourly use; HR checks both daily and monthly ceilings.

Procedure: Step 5.1: The direct manager reviews operational impact, then Bahar Eskandari records the approved hours and reconciles actual use against the request. Step 5.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: A request exceeding either ceiling cannot be approved simply because the other ceiling has room; discuss another applicable leave category instead of altering timestamps.

Output and responsibility: Retain the hourly ledger and payroll classification; any conversion to days or entitlement balance uses an explicitly agreed work schedule and reviewed accounting treatment, not an assumed workday length.

Exception control: Record why the standard path is difficult, what risk the departure introduces and which compensating control is proposed. An exception request does not become permission through delay or silence. Where the matter remains unresolved, preserve the existing approved position and mark the proposed change as pending. Escalation must include the problem and feasible alternatives, rather than only transferring an unexplained request to another manager.

6. Occasional remote work and output evidence

Definition and boundary: Occasional remote work is limited to 8 days per month and requires direct-manager approval; it is not leave and does not erase agreed availability obligations.

Required inputs: Provide proposed days, planned outputs, required systems, secure access arrangements and on-site tasks requiring another employee’s coverage.

Procedure: Step 6.1: The manager checks suitability and monthly usage, agrees communication/handover arrangements and confirms deliverables; HR records the approved working arrangement. Step 6.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: Hands-on repair and assembly tasks require physical handling, while suitable web work may be remote; decisions depend on task evidence rather than job prestige.

Output and responsibility: Retain approval and delivered-work evidence, apply confidentiality under AR-HR-011, and do not treat remote work as a way to extend leave or evade absence reporting.

Handover control: The output must be understandable to someone who did not attend the original discussion. Include the relevant document identifiers, decision basis and outstanding obligations, while excluding unrelated private information. The receiving team checks whether it can continue the work from the record. If not, it identifies a specific missing instruction or dependency and returns that gap to the accountable owner for completion.

7. Lateness, absence and emergency correction

Definition and boundary: Lateness is a departure from agreed start arrangements; absence is unworked time without an established approved status after verification, not merely an incomplete entry.

Required inputs: Collect the employee explanation, agreed schedule, communication evidence, manager observations and any emergency or medical documentation.

Procedure: Step 7.1: The manager seeks clarification, Bahar Eskandari reconciles facts and Maryam Nouri reviews repeated or disputed cases under AR-HR-011. Step 7.2: Check that the

receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: Do not invent automatic fines, dismissal triggers or grace-minute thresholds; any payroll or disciplinary consequence requires the authorized factual and legal process.

Output and responsibility: Retain the determination, employee response and correction history, protecting the right to challenge a mistaken record without retaliation or public disclosure.

Verification control: Check the outcome against the original requirement rather than measuring only effort or activity. Record any remaining limitation so a later user cannot mistake partial completion for full acceptance. When several units contribute, each verifies its own domain and the coordinating owner checks the interfaces. A favorable finding in one domain cannot substitute for a missing legal, financial or technical conclusion in another.

8. Service continuity and Azarpakhsh example

Definition and boundary: Leave approval and project delivery planning are linked but separate decisions; delivery pressure does not cancel employee entitlements or authorize false attendance.

Required inputs: For Azarpakhsh identify web API ownership, Windows installation, hardware testing and support escalation before approving overlapping absences.

Procedure: Step 8.1: Nazanin Farahani documents web handover, Roozbeh Mohseni documents Windows dependencies and Niloufar Ahmadi checks support readiness; deputies resolve conflicting coverage. Step 8.2: Check that the receiving owner understands the decision and record any unmet prerequisite before proceeding.

Decision rule and exception: Use AR-SW-022 escalation routes for incidents and AR-ISS-024 for the controller/RAM problem; an employee on leave is not assumed to be the active incident owner.

Output and responsibility: Keep the leave record in HR and the technical coverage plan in project knowledge, linking roles without exposing private reasons for leave to the broader project team.

Learning control: Close the operational record only when the responsible owner can show the required evidence and explain unresolved items. A reusable lesson states the situation, decision, result and limitation rather than blaming an individual. Submit validated organizational knowledge to the repository with its source links. Keep restricted personal or contractual attachments under their access controls even when an anonymized lesson is available to broader readers.

Leave and remote-work limits

Category	Approved limit	Authority and record
Annual paid leave	26 working days per year	Direct-manager coverage approval and HR balance check.
Sick leave	Certificate required; no invented numerical cap	HR confidential verification; manager receives coverage information.
Unpaid leave	Up to 30 days; above 30 and up to 90 days	Deputy through 30; CEO above 30 through 90.
Hourly leave	Up to 4 hours/day and 16 hours/month	Direct manager and HR reconciliation of both limits.
Occasional remote work	Maximum 8 days/month	Direct-manager approval; recorded as work, not leave.

Records, interpretation and controlled revision

Records and interpretation. Every retained decision must identify the originating request, document and section used, responsible node, evidence reviewed, approving authority, outcome and remaining condition. A draft, recommendation, proposal and approved decision must remain visibly distinct. Corrections preserve the earlier record and explain the reason; they do not silently erase a rejected option or unresolved concern. The organizational knowledge library holds reusable approved policy and validated lessons. Personnel, medical, commercial and access-sensitive evidence remains restricted according to its purpose. A reader must not infer a current entitlement, capacity or approval merely because an earlier example appears in the library.

For an apparent conflict, compare scope, date, owner and the specialized policy before escalating to the responsible deputy and, where necessary, Chief Executive Management. Do not create a new rule by averaging contradictory statements. The owner determines whether the issue is interpretation, a factual correction or a proposed policy change. Changes follow an explicit approval and version process; this document remains version 1.0 until replaced by an authorized revision. For retrieval, cite the document ID and named section, and distinguish general procedure from the dated fictional Azarpakhsh example. Upward summaries under AR-TRN-026 preserve the link to the underlying decision and never turn a proposed outcome into an accomplished fact.
